RESEARCH INTERESTS

I am interested in *geometric structures on manifolds, discrete subgroups of Lie groups, geometric group theory, and deformations and rigidity of group actions.*

My research focuses on discrete subgroups of general linear groups that preserve some geometric structure. I have been studying groups that preserve *real convex projective structures*, mainly from the perspectives of *geometric group theory* and *non-positive curvature*. I am also interested in the deformation spaces of such groups, for instance *Anosov representations* and their generalizations.

More recently, I have been interested in the *rigidity/flexibility* of discrete group actions on compact manifolds by homomorphisms (i.e. *discrete subgroups of homeomorphism groups*). In particular, I have been studying deformations of *standard actions*. (Some examples of standard actions are the action of a uniform lattice on its Furstenberg boundary and the action of the fundamental group of a non-positively curved compact Riemannian manifold on the visual boundary of its universal cover).
